theBUG Highlights

- Convenient stroller wheel configuration
- FRONT wheel drive Self propel-able Tilt in Space
- REAR wheel drive Self propel-able Tilt in Space
- Easily transportable with detachable upper assembly
- Power up! Just transfer the upper assembly to a power wheelchair base utilizing our "Dock" system.

Self propel-able Tilt in Space!

theBUG

The only certainty in life is change and we welcome it! "Transitional Mobility™" defines theBUG's ability to seamlessly transition to the specific configuration that is most beneficial to the child in a particular window of time. As the child develops, theBUG can adapt to meet new needs and eliminates the need to purchase new mobility equipment!

Early on, a child needs a mobility device that can accommodate supportive seating but he or she may not yet be self propelling. Therefore, the "Stroller" configuration with 12.5" rear wheels may be most appropriate.

When independence is the goal and the child is able to self propel, just add the large rear wheels. Same chair, new application! Further adapting to the child's ability, a detachable upper assembly allows for switching to front or rear wheel drive in seconds. This exclusive feature makes the Bug easily transportable.

Specifications

Lower Mobility Base		
Small	Weight (w/o rear wheels)	from 12 lbs.
	Overall length	from 27"
	Width (CL of hubs)	from 17"
	Solid Seat Widths	6" to 14"
Medium	Weight (w/o rear wheels)	from 13 lbs.
	Overall length	from 28"
	Width (CL of hubs)	from 20"
	Solid Seat Widths	6" to 16"
Upper Seating Assembly (detachable from base)		
Std. non-tilt		
	Weight (w/o seating)	from 12 lbs.
	Seat Angle	3 degrees
	Weight Capacity	90 lbs.
OIS (Tilt in Space)		
	Weight (w/o seating)	from 15lbs.
	Seat Angle	Tilt -5 to +45 degrees
	Weight Capacity	90 lbs.
In common to both the Standard & OIS		
	Seating Depth	from 6"(adj. 4") to 16"
	Seating Width	from 6" to 16"
	Back Angle	-5 to +30 degree
	Back Height	from 10" (adjustable)
	Leg Drop	4" to 15"
